Patent No. 6103882

GENERAL INFORMATION:

APPLICANT: Suenaga, Masato

APPLICANT: Tanaka, Yoko

APPLICANT: Tanaka, Yoko

TITLE OF INVENTION: METHOD OF PRODUCING A 19P2 LIGAND

NUMBER OF SEQUENCES: 52

CORRESPONDENCE ADDRESS:

ADDRESSEE: DIKE, BRONSTEIN, ROBERTS & CUSHMAN, LLP

STREET: 130 Water Street
                                                                                                                                         Sequence 9, Application US/09105678A

Sequence 14, Application US/09560915

Patent No. 6383764

GENERAL INFORMATION:

APPLICANT: Civelli, Oilvier

APPLICANT: Lin, Steven

TITLE OF INVENTION: Relating To Prolactin Releasing Peptide (PrRP)

FILE REPRENCE: P-UC 3334

CURRENT FILING DATE: 2000-04-28

NUMBER OF SEQ ID NOS: 24

SOFTWARE: PASTSEQ for Windows Version 4.0

SEQ ID NO 14

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 13,

"A prolactin-releasing peptide in the brain.";
Nature 393:272-276(1998)
-!- FUNCTION: Stimulates prolactin (PRL) release and regulates the expression of prolactin through its receptor GPRIO. May stimulate lactotrophs directly to secrete PRL.
-!- TISSUE SPECIFICITY: MEDULIA OBLONGATA AND HYPOTHALAMUS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,

Pept. 83:1-10(1999).
-!- FUNCTION: Stimulates prolactin (PRL) release and regulates the expression of prolactin through its receptor GPR10. May stimulate lactotrophs directly to secrete PRL.
-!- TISSUE SPECIFICITY: MEDULLA OBLONGATA AND HYPOTHALAMUS.

-1- CATALYTIC ACITVITY: ACYL-CA + 1-acyl-mglycerol 3-phosphate = CoA + 1,2-diacyl-sn-glycerol 3-phosphate.
-1- PATHWAY: De novo phospholipid biosynthesis; second step.
-1- SUBCRILIDIAR LOCATION: Inner membrane-associated (Potential).
-1- SIMILARITY: BELONGS TO THE 1-ACYL-SN-GLYCEROL-3-PHOSPHATE
ACYLTRANSPERASE PAMILY.

J. 489:343-351(2000).

-!- FUNCTION: Plays a role in modulating the ganglioside content of the lipid bilayer at the level of membrane-bound sialyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                        glycoconjugates.
CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-,
alpha-(2->8)-glycosidic linkages of terminal sialic residues in
oligosaccharides, glycoproteins, glycolipids, colominic acid and
synthetic substrates.
                                                                                                                                                                                                                                                                                                                                                                                                                                   -i- SÜBÜELLÜLAR LÖCATION: Membrane-associated.
-i- TISSUB SPECIFICITY: Highly expressed in skeletal muscle, testis, adrenal gland and thymus, followed by pancreas, liver, heart and thymus. Weakly expressed in kidney, placenta, brain and lung.
-i- MISCELLANEOUS: Optimum pH is 3.8.
-i- SIMILARITY: BELONGS TO FAMILY 33 OF GLYCOSYL HYDROLASES.
-i- SIMILARITY: Contains 3 BNR repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  28.6%; Score 44; DB 1; Length 428;

-1- SUBCELLUIAR LOCATION: Integral membrane protein.
-1- TISSUB SPECIFICITY: LATERAL BYE.
-1- PTM: SOME OR ALL OF THE CARBOXYL-TERMINAL SER OR THR RESIDUES MAY BE PHOSPHORYLATED (BY SIMILARITY).
-1- MISCELLANBOUS: THIS OPSIN HAS AN ABSORPTION MAXIMUM AT 520 NM.
-1- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                            Lateral eye opsin.

Bacteriol. 179:135-7155 (1997).

I. FUNCTION: The UvraBc repair system catalyzes the recognition and processing of DNA legions. Uvra is an ATPase and a DNA-binding processing of DNA legions. Uvra is an ATPase and a DNA-binding processing of DNA legions. Uvra is an ATPase and a DNA-binding current and an antiles scans DNA for abnormalities. When the presence of a lesion has been verified by uvrB, the uvra molecules dissociate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (By similarity).
SUBUNIT: Forms a heterotetramer with uvrB during the search for lesions (By similarity).
SUBCELULAR LOCATION: Cytoplasmic (By similarity).
SIMILARITY: BELONGS TO THE ABC TRANSPORTER FAMILY. UVRA SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PEAM; PP00005; ABC_tran; 2.
